

# AddressTools

Ensure all addresses in your Salesforce org are standardized, validated & consistent

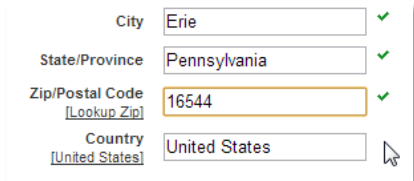

AddressTools is a simple extension to the standard Salesforce interface which provides a vast array of address data cleansing features. Your users will no longer be left wondering which values to use, making user input less prone to errors. AddressTools does not require you to make any changes to your Salesforce objects, page layouts or custom triggers. With our detailed walkthrough videos, it can be setup within your org in minutes!

## FEATURES

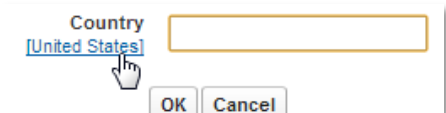

**Country and State Pick Lists** – With over 3,000 States worldwide and manual State input for Country's where a pick-list is unavailable. The Country value will auto-complete when a State is entered.

**City, State and Country Auto-Population** – Enter a US Zip-Code and the City, State & Country values will automatically be completed.

**QuickComplete Feature** – Store your most common country name for quick & easy input, so if left blank, it will be populated automatically.

**Interactive Street Level Validation** – Validate and standardize all field of an address on input. Also includes scheduled and batch validation for existing addresses.

**TimeZone Population** – Automatically populate a field on an object with the time zone and time offset.

**ISO Code Country Values** – Option to store the ISO 2 or 3 letter code or alternatively the full country name.

**Fix Common Typing Errors** – Ensure all Country and State fields in your org are correctly spelt and standardized.

**Easy to Install** – No coding or API access required.

*“The support is super fast and professional.” – Roey Benami*

*If you comparison shop, the other companies will try to convince you that you need to spend thousands of dollars to get the same functionality. Don't believe them!! AddressTools provides the same functionality for a lot less money. Works really well, and their support is exceptional! – Brian Polk*
